DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10/14/03 has been entered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-3 and 5 are rejected under 35 U.S.C. 102(e2) as being anticipated by US Patent 6178368 to Otake.

Re: claims 1 and 2. Otake shows in figure 1 a device for controlling an over-rolling of a vehicle having a vehicle body 12, wheels 10FL,FR,RL,RR, a steering system 16, and a brake system 28,22,24FL,FR,RL,RR, the device comprising:

means 34 or 36 for providing a rolling amount of the vehicle body, means 38 or equation (7) for providing a change rate of the rolling amount of the vehicle body,

means or the control scheme of electric control 30 responsible for the calculation of equations (3) and (12) for calculating a target deceleration G_{xt} of the vehicle based upon the change rate of the rolling amount R_{rr} so as to increase the target deceleration from a predetermined minimum value to a predetermined maximum value along with an increase of the change rate of the rolling amount (since substituting equation (3) in for the Q_{rs} value in equation (12) results in G_{xt} being increased when R_{rr} is increased), and means or the control scheme of electric control 30 responsible for the calculation of equations (1) and (12) for controlling of the brake system such that the brake system is actuated to accomplish the target deceleration of the vehicle when the rolling amount G_y exceeds a threshold value G_{ylim} predetermined thereof (since substituting equation (1) in for the Q_{rs} value in equation (12) results in a target deceleration G_{xt} being accomplished when $|G_y|$ is greater than G_{ylim} since G_{xt} is directly proportional to $(|G_y| - G_{ylim})$).

Re: claim 3. Otake discloses in equation (3) the limitation wherein the rolling amount is estimated to be substantially proportional to a weighted sum of lateral acceleration and roll rate of the vehicle body.

Re: claim 5. Otake discloses in equation (7) the limitation wherein the change rate of the rolling amount is estimated to be substantially proportional to a change rate of lateral acceleration of the vehicle body.

Allowable Subject Matter

4. Claims 4 and 6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
